Every conversation is an opportunity for Collaboration

"I wanted to look him/her in the eye." It's a common refrain that refers to the importance of body language. However that "look" might take a day of travel and cost most of a day of productivity.

Temovi Business offers cloud-based Smart Office collaboration tools that let participants get engaged and stay engaged from anywhere. Don't spend eight hours traveling to a one hour meeting. Eliminate your organization's expensive web conferencing service – add a personal collaboration room that integrates with your Smart Office UC client.

- Choose screen share only option or multi-party video and screen share.
- Available to anyone with a web browser (no client required).
- Reservation-less rooms make it easy to connect and share.
- Connect from the office or from the road with mobile apps.
- Adapt to bandwidth constraints with advanced, Scalable Video Coding-based, video (SVC).
- Minimize disruptions with powerful moderator controls.

Traditional Ad Hoc Conferencing

Casually add a third party to your conversation, no matter whether you are using a physical phone, a computer or a mobile device.

MeetMe Audio Conferencing

MeetMe Conferencing supports reservation-less conference rooms, users dial a common access number and quickly enter using the virtual room's access number. Room moderators have a personal passcode that controls access and services. Permanent access numbers and credentials make it easy to "hop-on" to ad-hoc meetings and provide consistent access to scheduled meetings.

Participants can be in the office or working remotely on the road. It's also easy to configure local access numbers for other geographies to simplify worldwide access and reduce toll costs. Best of all, MeetMe Conference 0ervices are integrated into a number of client, so moderators launch meetings and see participants join or leave. MeetMe Conference also supports video for the active speaker.

Screen Share and Video Conferencing

Temovi Smart Office services make it easy to extend an audio conference with screen sharing or enrich the collaboration experience by including multi-party video conferencing. Users can launch sessions from a Windows client or use any web browsers. Guests only need a web link to join.

As with audio conferencing, users get their own collaboration room that is always ready for action. Web-based access assures that road warriors and guests are never excluded. Robust moderator controls can silence a mysterious barking dog or lock a conference to preclude unexpected guests.
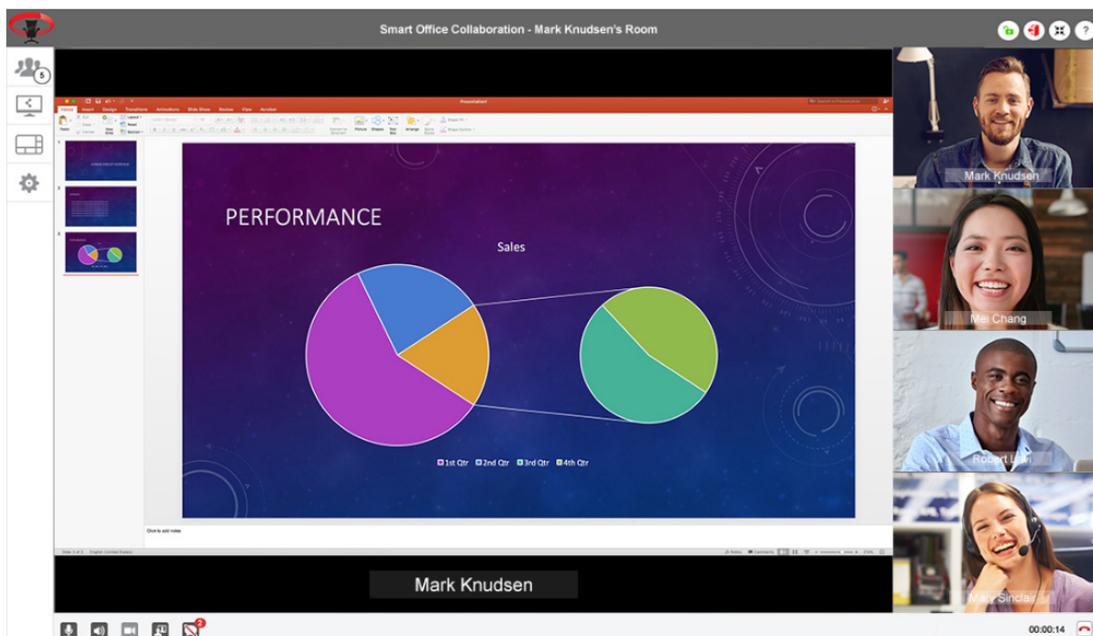

UC Client Integration

Smart Office Collaboration Rooms can be instantly launched from a Smart Office UC client, desktop or mobile. Smart Office UC clients also enable users to easily invite co-workers and/or share meeting credentials via e-mail or calendar invites.

Collaborate on the move

In the office or on the road, users can stay connected. Anyone can quickly access the conversation and content with just a web browser. Advanced, SVC-based, video automatically adjusts the quality of the video to match the user's bandwidth. Ideal for road warriors using hotel Wi-Fi or 4G mobile data.

Benefits

- Support for all types of conferences
- Integrated audio, video and screen share
- Similar experience across phone, desktop and mobile
- Services available for both business and residential
