

Smart for Business - Smart for You

Smart Office clients deliver rich collaboration experiences to PCs, Macs, iOS and Android devices, in or out of the office. Make and receive audio and/or video calls, send instant messages and collaborate with video and screen sharing directly from desktop or mobile devices. Seamlessly move calls between clients, desktop phones and mobile devices. Employees can turn any workspace into a virtual office; as ideal for telecommuters and mobile employees as traditional office workers.

Smart Office clients deliver PBX calling services, unified company directory, user presence, instant messaging, conversation logs, voice and video conferencing and screen sharing. It's easy to find co-workers fast and get more done.

Patent Pending Omni Technology Simplifies Deployment – Reduces Cost

Smart Office clients leverage our exclusive patent-pending Omni technology that combines WebRTC (Web Real Time Communications) and application container technology. Users maintain the rich experience they deserve while service providers gain the power and flexibility of a centrally controlled experience. Users always have the latest version of the client and service providers don't have to constantly manage upgrade files. No IT hassles or expense.

Smart Office design reflects the intersection of the web and real time communications, making it practical to use common web tools to customize or rebrand clients; even add new features to live deployments.

Stay Connected

Incoming business calls ring and can be answered on the desktop, complementing or completely replacing a desk phone. Outbound calls show the user's office number in Caller ID so it's easy to maintain a consistent business identity from the road or home office.

Smart Office is designed for business users, not consumers, so it's ready to manage multiple calls, deliver collaboration services and integrate with other corporate services.

Key Capabilities

- Rich PBX services
- Presence
- Instant Messaging
- Click-to-dial voice and video
- Smart Office collaboration room
- E-mail and Clipboard collaboration invitation
- Conversation logs
